

Why do Enterprise CIOs and CFOs Choose PrinterOn for their Mobile Printing Solution?

1. Enterprise-grade Infrastructure

The PrinterOn infrastructure is Enterprise-grade by design. Unrivaled in the industry, the technology has been stress-tested with millions of pages printed in production environments globally on multiple disparate networks. It is likely that this print volume processed in real-world applications exceeds the rest of the industry combined.

2. Flexible

PrinterOn supports various use cases for internal corporate printing, guest printing via public print locations, access control, secure release and pull-printing (combined with print management solutions.) These use cases are further supported by the following print submission methods: email, mobile apps, web printing portals and the PrintWhere® Windows based driver.

3. Deployment Options

PrinterOn Enterprise supports various deployment models depending on the security, network and infrastructure requirements of the Enterprise. PrinterOn is a modular system which allows for deployment across disparate networks or firewalls without network changes required to the Enterprise infrastructure.

4. Authentication Options

PrinterOn Enterprise is designed to integrate with existing user management systems such as Active Directory and LDAP ensuring users are authenticated no matter which printing method they choose.

5. Print Management

PrinterOn integrates with most print management systems on the market. Enable tracking, auditing and billing for all print jobs by combining PrinterOn with a preferred or existing print management solution for a true Enterprise-class mobile printing experience.

6. Patent Protected

PrinterOn owns many issued and pending patents that protect our ability to provide a unique global cloud printing infrastructure. The investment made in our core intellectual property ensures PrinterOn is capable of providing seamless operation and unique value solutions to the market.

7. Secure

The solution is designed to provide a high level of security with documents encrypted on-the-go and at rest with unique AES encryption keys for every print job. In addition, PrinterOn seamlessly integrates with LDAP/AD ensuring the Enterprise maximizes current security infrastructure.

8. Scalable

PrinterOn has been built from the ground up as a highly scalable and redundant Enterprise platform. The solution is fully modular and designed to allow for growth as usage increases. PrinterOn Enterprise can accommodate thousands of users and print devices within a single deployment.

9. Extensible

Leverage PrinterOn's robust API suite to extend and integrate the mobile printing processes of PrinterOn Enterprise. PrinterOn APIs can be used to provide remote print capability for ERP systems such as SAP® and Oracle® as an alternative to dedicated leased lines or VPNs. PrinterOn solutions can also be configured to work in a Citrix® environment to provide users a way to print to any printer on any network from XenApp or XenDesktop.

10. Document Fidelity

The PrinterOn platform has consistently provided high quality document output for over 13 years. Users of our service have printed over 60 million pages.
