

PrinterOn provides Eaton School District students and staff a printing solution for Chromebooks

"We had no suitable printing solution for the Chromebooks that we deployed to our students and staff. With PrinterOn Enterprise, they can now print from their Chromebooks and we can pass user credentials to our print management system to limit wasteful printing, keeping expenses down. I would highly recommend PrinterOn as a printing solution for any school district."

*Penni Dyer, Tech Department
Eaton School District*

Benefits & Results

- ✓ Students can now print reliably from their Chromebooks
- ✓ Lab computers that were being used for printing can be used for other tasks
- ✓ Other print methods now available to students and staff, email, web submission and mobile apps
- ✓ Paper and toner wasted is no longer a problem
- ✓ PrinterOn Enterprise integrates with their print management system

Background

The Eaton School District in Colorado works hard to ensure every one of their 1700 students achieves to their highest potential through small classes, individualized instruction, and a variety of opportunities. The district is comprised of five schools: Benjamin Eaton Elementary School, Eaton Elementary School, Galeton Elementary School, Eaton Middle School, and Eaton High School.

Challenge

The challenge Eaton was facing was that students were having problems printing from their Chromebooks. Drivers can't be installed on them so they tried using Google Cloud Print, which worked but wasn't reliable enough for their needs. There was an issue with their network receiving the jobs from Google because the service would go offline intermittently. Also, students were printing too many copies of their work by mistake which wasted a large amount of paper and toner. Students were frustrated and staff members were agitated, as they could not print assignments and lesson material that was urgently needed for the next period. Most of the IT department's

resources were being focused towards troubleshooting this issue. Eaton decided that they needed to do something different, so they approached PrinterOn for a reliable secure printing solution.

Solution

PrinterOn provided Eaton with the PrinterOn Enterprise Solution. Utilizing their Gmail email system, Eaton School District can leverage the Google cloud print option that is currently available within Google to securely send print jobs to the PrinterOn Enterprise solution for printing to printers that are already configured within their physical network. In addition to having Google Cloud Print, the school district also has the option of enabling mobile, email and web submission methods later on once the students get comfortable with the Google Cloud Print solution.

In the end, Eaton is saving money that would have been spent purchasing a larger amount of ink and paper. They are saving time and energy too. All this means they can focus more on educating their students, because enriching the minds of America's future leaders is Eaton's first priority.
