

Mobile printing solutions for Citrix

Simple File>Print workflow gives Citrix users access to enterprise printers on any network

Organizations worldwide use Citrix® to virtualize desktops and applications into a secure on-demand service. Users are able to access their Windows® desktop no matter where they are from any device.

This centralization of the desktop environment provides control to IT departments and reduces configuration time spent on individual devices. But there is one problem for users of Citrix, printing. Because Citrix creates a centralized environment, there is no way for users to access printers outside of that network.

Print what you need, wherever you may be

PrinterOn® provides a way for Citrix users to access and print to any printer on any network from any device running Citrix, Citrix XenDesktop® or Citrix XenApp®. By deploying PrinterOn Enterprise on a Citrix server, users can access PrinterOn PrintWhere® on their device.

PrintWhere provides native File>Print capability from any Windows application. Through PrintWhere, users are able to search for and print to all enabled enterprise printers without being connected to the network or having particular print drivers installed. This gives employees remote access to enterprise printers no matter where they may be.

Usage Scenario

An employee traveling between office locations or visiting different buildings on campus needs to print from their tablet but can't because they are unable to connect to the network or have the necessary printer drivers.

Solution

- To enable printing from Citrix, an enterprise with PrinterOn would enable employees to access the PrintWhere application from their Citrix sessions.
- Employees would simply use the standard File>Print method from within any Windows application, select PrintWhere in the printer list, search for the printer they want to use and print their documents.

Benefits

- **Print to any PrinterOn-enabled printer on any network in the enterprise directly from Citrix**
- **Print from any tablet, mobile device, thin client or desktop running Citrix**
- **Employees stay productive on-the-go**
- **Also print to all PrinterOn public printing locations or home printers***

PrinterOn can be deployed on your Citrix server to provide employees with remote access to network printers no matter where they may be, at the office, at home or a public printing location such as an airport or library.

In a typical enterprise, Citrix users are only able to print to the printers directly connected to the Citrix server. PrinterOn allows users to print to any PrinterOn-enabled printer no matter where it is located. Whether they are using XenApp from a smartphone or tablet or XenDesktop from a laptop in the office, they can choose a printer that is convenient for them.

All PrinterOn-enabled printers are listed in the PrinterOn Global Directory. Users can access any of these printers through the PrintWhere application on their device.

PrintWhere uses the standard File>Print workflow for a consistent printing experience from Citrix.

Open the PrinterOn Printer Select window to find and set your printer, then simply print from your Windows application directly to printers anywhere, whether in the office, on-the-go or at a one of the PrinterOn public printing locations.
