

Only PrinterOn has a complete enterprise mobile printing platform: mobile apps for today's most popular mobile platforms, seamless access to enterprise applications and complete printer connectivity.

PrinterOn Mobile Apps – True Enterprise Printing on the Mobile Device

Enterprise Mobile Printing Vision: Equivalent to Desktop Printing

It's a simple concept: enable enterprise mobile users to print from their mobile devices just as they could from their desktop. The need to improve productivity is rapidly shifting enterprise system access to mobile devices. With that, printing services must shift too. With PrinterOn, they can.

Why PrinterOn Mobile Apps are Second to None

The PrinterOn mobile apps are unparalleled because only they harness all the power of the world's leading mobile print platform: PrinterOn Enterprise.

Secure and scalable, the power of PrinterOn Enterprise is incorporated natively into the PrinterOn mobile app suite. That means that virtually all enterprise printing workflows are supported on a mobile device.

Features such as PrinterOn's Adaptive Print Service Discovery and centralized PrinterOn Directory make it extremely easy for users to access any printer on the go.

Only PrinterOn has a complete enterprise mobile printing platform: mobile apps for today's most popular mobile platforms, seamless access to enterprise applications, and complete printer connectivity.

The "Easy" Features List

What printing features need to be part of the mobile device printing experience? Here is a quick list of those features that first come to mind:

- Setting common print options such as copies and page range
- Organizing frequently used printers
- Access to cloud content such as Google Drive, DropBox, iCloud
- Printing content from other apps including native mail clients or web content

The PrinterOn mobile printing apps include all of this on Android, iOS, and BlackBerry.

The "Not-so-easy" Features List

Now what about the challenging features? The ones that define enterprise-grade requirements? They are subtle and sophisticated

but necessary capabilities that mobile users demand to replicate the desktop printing experience. These features make the PrinterOn enterprise mobile printing apps unique. Here are a few:

- PrinterOn has intelligent printer discovery across multiple networks and technologies including Internet, LAN, network discovery and GPS.

Other solutions rely on simply retrieving lists from a server to present to the user. This falls short because it is not nearly as robust and dynamic as PrinterOn.

- PrinterOn can connect to multiple services including secure enterprise, public cloud or hybrid private cloud services.

Others simply connect to the corporate server on the Local Area Network.

- PrinterOn’s integrated Remote Release allows users to release their printed jobs directly from the same mobile app regardless of location or network, increasing the number of release options.

Others require users to join a different network than they used to print originally, or use additional software and hardware to release their print jobs.

- PrinterOn has advanced access control including limiting access based on corporate AD/LDAP organizations.

Others take an “all or nothing” approach and simply grant access to all or none.
