

Effective June, 2012

PrinterOn Production Cloud Print Services Release Notes

Product Changes and Enhancements

The June 2012 PrinterOn Production Cloud Print Technology Upgrade includes many new features that improve the overall print experience and provide new tools for administrators to manage their services.

This Technology Upgrade also includes multiple enhancements and improvements to existing PrinterOn Cloud Print features. The following is an overview of the changes made in this version of the PrinterOn Website.

Web-Based Cloud Printing:

- **NEW** - A new remote Web Release Interface enables users to release print jobs to printers inside or outside the same network and regardless of physical proximity to the printer. This new functionality allows users to release their print jobs to a printer using PrinterOn Secure Print Release from any Internet connected device in the world.
- Addressed UI issues when printing via the Cloud Printing Portal, such as icons shifting during mouse-over and more consistent font use.
- Improved presentation of document/format specific print options to end-users.

Email Printing:

- **NEW** - Intelligent content inspection improves overall email-based printing by reducing potentially unwanted printouts such as content that would otherwise print blank pages.
- Improved quality of email body printing containing certain fonts. Addressed an issue where certain fonts were not properly printed.
- Reduced warnings to users when extra attachments that may be part of an email signature are received by the print service.

Service Administration:

- **NEW** - PrinterOn's new Bulk Service Creation to allow partners to add dozens, hundreds or even thousands of printers in one simple step.
- **NEW** - A new easy to use Bulk Printer Configuration service allowing administrators to configure nearly every printer option provided by PrinterOn to any number of printers in a single step.
- **NEW** - Added a new option to allow administrators to choose whether to show duplex options to users using PrinterOn's Print Option page.
- **NEW** - Add a new option to hide or show all Enterprise printers in the PrinterOn Directory in one step.
- Enterprise administrators can now set Printer Department names longer than 30 characters.

- Addressed an issue where geo-coordinates were not copied to new Portals when cloning an existing service.
- Improvements to the configuration of release code options.
- Added easier access to PrinterOn API service credentials for partners using the PrinterOn APIs to develop accounting and billing services.
- Addressed minor issues when configuring tax rates for pay-for-print services.
- Addressed an issue that could cause an error to be reported to the administrator when setting hours of operations for a printer.
- Addressed an issue that did not allow a PrinterOn Enterprise administrator to disable charging for cover pages.

General Improvements:

- Improved PDF print quality.
- Addressed an issue that could cause a Directory Search requests to return invalid responses when the city name contained certain characters.
- Addressed an issue in which a printer located at an address different from its service address would not appear at the correct location when viewed using Google Maps.
- Addressed an issue in which the usage information shown on a printers “Details Page” was incorrect when using PrinterOn’s Access Control Lists to limit access to a printer.
- Provided more flexibility when creating PrinterOn Account names to allow additional characters such as dashes and periods.
- Many stability and performance improvements for the overall service.
