

PrinterOn Mobile for Android Release Notes

3.0.6

Product Changes and Enhancements

PrinterOn Mobile for Android offers an integrated solution for accessing both PrinterOn's global network of Public Print locations and the PrinterOn Enterprise Platform in a single unified application. PrinterOn Mobile for Android simplifies the process of discovering and printing to all PrinterOn's services.

PrinterOn Enterprise New Additions

- **Fixed – Save Printers to Contacts**
Users may now save printer information, including location and email address, to Contacts from within the Android app.
- **Improved – Document Name Consistency**
Web page and images files submitted from the mobile app were not preserving their original names or titles after submission. Job Names now include information such as the URL to document title after submission to better represent the original content submitted for printing.
- **Fixed – Accelion ECM support**
Addressed an issue that caused files shared from the Accellion ECM app for Android to the PrinterOn Mobile app to fail during print submission. The problem has been resolved.
- **Improved – Danish & Korean Localizations**
A number of minor improvements have been made to both Danish and Korean localizations throughout the application.

Please contact support@printeron.com if you have any questions.
