

PrinterOn Mobile for Android Release Notes

Version 3.3.0

Product Changes and Enhancements

PrinterOn Mobile for Android offers an integrated solution for accessing both the PrinterOn Server Platform as well as PrinterOn's global network of Public Print locations in a single unified application. PrinterOn Mobile for iOS simplifies the process of discovering and printing to all PrinterOn's services.

PrinterOn Mobile for Android supports Android 4 or newer.

The following are some of the enhancements and improvements that have been made in this version of PrinterOn Mobile for Android.

- **New – Secure Release Anywhere Support**

PrinterOn Mobile for Android fully supports PrinterOn's Secure Release Anywhere pull print workflow. Users can locate, save and print to Secure Release Anywhere pools of printers. Using the PrinterOn Mobile App, users can both print to a Secure Release Anywhere pool and locate all associated release stations.

- Users may also easily view all release locations in list or map format.
- Users can release print jobs directly from their mobile phone to any printer in the Secure Release Anywhere Pool.
- Using the QR code scanner, users can quickly add Secure Release Anywhere Pools, or identify release stations.

- **New – Enhanced Web Browser**

An all new fully featured web browser has been added to the PrinterOn Mobile App, providing major improvements in usability and flexibility including:

- Integrated bookmark management
- History and session management – remember and quickly start browsing from previously printed pages
- Support for HTTP basic authentication popups

- **New – Microsoft OneDrive Support**

PrinterOn Mobile for Android now fully supports selecting and printing documents stored in Microsoft OneDrive directly from within the PrinterOn Mobile App. Users can browse and select documents to print without being required to use another application. NOTE: A Microsoft account connected to OneDrive is required to use this functionality.

- **Improved – Web Page Print Quality**

Improved the quality of web page print content generated and submitted for printing, including removing unwanted blank pages and general fidelity improvements.

- **Improved – Page Orientation Support**
Improved support for selecting page orientation for print jobs prior to submission.
- **Improved – Additional Printer Location Details**
Additional printer location details have been added to the Details page for search results.
- **Improved – International Language support**
Resolved multiple issues related to international characters in the application, such as entering some Far East characters in the release code field, and improvements in localizations.
- **Fixed – User Interface Reliability**
Resolved numerous issues in the Mobile App user interface including unwanted blank pages being displayed or unexpected crashes on some pages such as tapping back when refreshing printers details or when Google Play Services is not installed.
- **Fixed – Google Drive Document Search**
Resolved an issue that caused searching Google Drive folders to fail when the the contents were still being loaded.
- **Fixed – QR Code Printer Search**
Resolved an issue that caused PrinterOn Mobile for Android to fail to read QR codes generated using the PrinterOn Express|Enterprise Configuration Manager.
