

# PrinterOn for Microsoft

## Secure, enterprise mobile printing app for Microsoft Intune (iOS/Android)

The PrinterOn for Microsoft app ensures that your mobile users can print securely wherever they are, while keeping data and devices secure.

### Benefits to IT:

- Secure mobile printing apps for iOS/Android specifically for Microsoft Intune
- Easy to set up through your Azure portal
- Remote deployment to assigned users
- Create and apply specific configuration policies

### Benefits to Users:

- Print from any device on any network
- Maintain productivity and stay connected
- Print to any PrinterOn public printing location
- Consistent printing experience no matter the device or location

## Secure printing for your mobile workforce

While most MDM/MAM providers offer basic app distribution and management, PrinterOn has provided additional integrations for MDM providers such as Microsoft Intune.

PrinterOn for Microsoft is a Microsoft Intune-specific mobile app for iOS and Android that lets users search for and print securely to all PrinterOn Enterprise-enabled printers in your organization, whether on or off-network. Users of the app can also access PrinterOn public print locations such as hotels and airport lounges when they are out of the office traveling for business, keeping them connected and increasing productivity.

By adding Microsoft Intune libraries into the standard PrinterOn mobile apps, administrators and organizations can benefit from increased app control and the security provided by Microsoft Intune app protection.

The Intune SDK provides the PrinterOn iOS and Android mobile apps with features like:

- Data encryption on save
- Integrated Azure AD single sign-on and PIN enforcement policies
- Multi-identity support
- Secure lock and wipe of remote devices
- File and clipboard restriction policies

## Easy configuration makes app management a breeze

Through existing tools provided in your Azure portal, you can remotely deploy and configure the PrinterOn for Microsoft app quickly and easily.

1. Add the PrinterOn for Microsoft app to your Azure portal.
2. Deploy the app by assigning it to one or more groups of Azure AD users.
3. Create a configuration policy and then assign the policy to selected users.

## PrinterOn Enterprise - the True Cloud Printing™ solution for your organization

PrinterOn is the only True Cloud Printing solution. Our unique infrastructure provides the ability to run enterprise-grade, secure print services from a cloud platform without any on-premise print infrastructure dependencies. Whether deployed in AWS, Azure or on-premise in your “private cloud”, PrinterOn is the only solution that offers this level of flexibility and the features required to solve virtually any print problem, no matter the workflow, network, device or industry.

### Mobile Printing

Secure mobile printing from any device with PrinterOn iOS and Android printing apps. (MDM versions for BlackBerry (Good), AirWatch, MobileIron, Citrix and Microsoft)

### Remote Printing

Securely connect to printers on remote networks no matter where they are located, without the use of VPN

### Pull Printing

PrinterOn Secure Release Anywhere™ provides pull print, tracking and management of mobile and desktop print workflows

### Desktop Printing with PrintWhere®

PrintWhere® provides native File>Print Windows printing and reporting for any computer or Surface tablet
