

PrinterOn Embedded Agent for Samsung XOA MFPs/Printers

Version 2.03.003 Release Notes

PrinterOn Embedded Agents

PrinterOn Embedded Agents for Samsung printers are embedded software applications that enable simple plug and play printing for PrinterOn's Hosted or On-Premise solutions. They eliminate the requirement for customers to install any additional hardware or software component to release print jobs submitted to the PrinterOn Service. The PrinterOn Embedded Agent software can be installed on a number of Samsung XOA device models, allowing users to print seamlessly using any of the PrinterOn supported document submission methods.

The list of supported XOA models can be found here: <http://www.printeron.com/solutions/technology-partner-solutions/samsung.html>

The following features and enhancements have been included in this new version (2.03.003) of the PrinterOn Embedded Agent for Samsung XOA MFPs/Printers.

Product Features and Enhancements

- **NEW – Integration with Samsung Kiosk Application** (SAMXOA-171, SAMXOA-197)
This new version includes built-in capability to allow trusted third-party applications like Samsung Kiosk to query and release jobs submitted to the PrinterOn system.
- **NEW – Job Management Settings** (SAMXOA-195, SAMXOA-194)
Using the SyncThru Web Service tool on the MFPs, the administrators can configure how long the Agent must hold the print jobs before purging them. This new version also provides Service Administrators with print job count information, in addition to providing them with the capability to delete all the print jobs held locally.
- **IMPROVED – PDH Server Settings Configuration** (SAMXOA-196, SAMXOA-201)
This new version introduces a simpler UI for presenting and validating PDH server connectivity.
- **ENHANCED – Job Updates Notification Improvement** (SAMXOA-198, SAMXOA-199)
Significant improvements have been introduced to reduce the communication overhead between the Agent software and PDH Server for job updates notifications.
- **IMPROVED – Troubleshooting Tools** (SAMXOA-166)
The Application Logging feature has been improved significantly to record all inbound and outbound transactions.
