

PrinterOn Hosted November 2016-1 Release Notes

PTS5050-WEB6044

Product Changes and Enhancements

The PrinterOn Hosted Cloud Print Services provide a wide range of services to customers and partners. Services include PrinterOn Hosted Cloud Print that offers print services for mobile apps, email and through PrinterOn's customizable Web Print Portal. The PrinterOn Web Services also offer PrinterOn's web-based service administration portals and PrinterOn's APIs.

Product Changes and Service Enhancements

- **New – Ricoh Card Authentication Package (CAP) and CAP-ES Support for PrinterOn Enterprise**
Support for Ricoh's Card Authentication Package (CAP) allows PrinterOn embedded for Ricoh HotSpot to provide a seamless authentication experience for end users reducing the effort to access print jobs and offering a range of user experience options.

PrinterOn Hosted has been updated to support remote configuration for PrinterOn Enterprise customers using a Hybrid deployment mode.

- **Fixed – Printers Not Displayed in PrintWhere Network Tab When Using ACL (WEB-6707)**
Addressed an issue that caused printers managed by a PrinterOn Access Control List to fail to be shown in the PrintWhere Network tab when valid credentials are provided.
- **Fixed – Deleting a Secure Release Anywhere Pool Causes Child Printers to Become Inaccessible (WEB-6706)**
Addressed an issue that caused printers that are part of a Secure Release Anywhere Pool to be inaccessible in searches if the Parent Pool was deleted without disconnecting the child printers first.
- **Fixed – Printers Output Destination Reset When Detached from PDS (WEB-6714)**
Addressed an issue that caused a printer's output destination IP to be reset when attaching or detaching the PrinterOn virtual printer listing from a PDS instance. Configured destinations are now correctly saved.

Please contact support@printeron.com if you have any questions.
