

PrinterOn Mobile for Android 3.5.4 - Release Notes

Version 3.5.4

PrinterOn Mobile for Android offers an integrated solution for accessing both the PrinterOn Server Platform as well as PrinterOn's global network of Public Print locations in a single unified application. PrinterOn Mobile for Android simplifies the process of discovering and printing to all PrinterOn's services.

PrinterOn Mobile for Android supports Android 4.4 or newer.

The following are some of the enhancements and improvements that have been made in this version of PrinterOn Mobile for Android.

Product Changes and Enhancements:

- **New – BlackBerry Work Email Body Print Support**

Added support for printing the content of email bodies using the integrated print button in the BlackBerry Work email app. Updates include content-based format recognition, increased security of content validation, as well as dynamic detection of available content processing applications for the content. Dynamic detection of content-processing applications allows the service to choose the optimal processing application based on available software installed on the server.

- **New – Ricoh Locked Print Code Support (SPOCPS-1005)**

Users can now submit and store preferred user codes for Ricoh devices when using the PrinterOn mobile apps. Support for Ricoh Locked Print offers users and administrators the ability to provide the native Ricoh secure release and tracking capability without any additional software installer or when used in conjunction with the PrinterOn Embedded agent for Ricoh HotSpot.

Ricoh Locked Print support allows the PrinterOn mobile app to recognize when a printer is configured and prompts users to enter a compatible Ricoh User Code. Codes are stored on the client device and can be managed by the end user, allowing them to store their User Code for future print jobs.

- **Fixed – Job History Presentation Consistency Reliability (AND-1030)**

Addressed a number of issues reported with Job History including:

- Job incorrectly being displayed as failed if the History page is refreshed while printing.
- Possible app crash refreshing print history.
- Job missing from print history if two jobs are submitted at the exact same time.

- **Updated – BlackBerry SDK Updated (AND-1050)**

BlackBerry Dynamics SDK updated to version 3.0.73.

- **Updated – AirWatch SDK Updated (AND-1049)**

AirWatch SDK updated to version 16.10.2.

System Requirements

- Android 4.4 or newer.
- MDM integrated applications require a configured MDM server and provisioned device to work correctly.
