

# netZcore PRINT Cloud

## Cloud Based Public Print- An Overview

netZcore PRINT Cloud users can easily locate and submit print jobs securely to the Cloud that can be retrieved at any enabled location. Mobile and web-portal users simply drop their jobs and name them using a username or email and optionally a password. The job will be retrieved once the user goes to the site, enters their user-

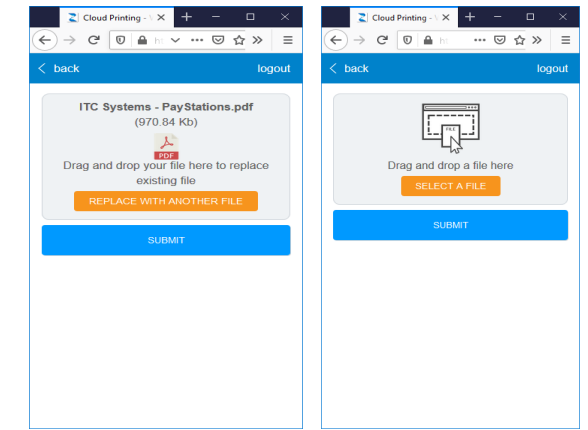

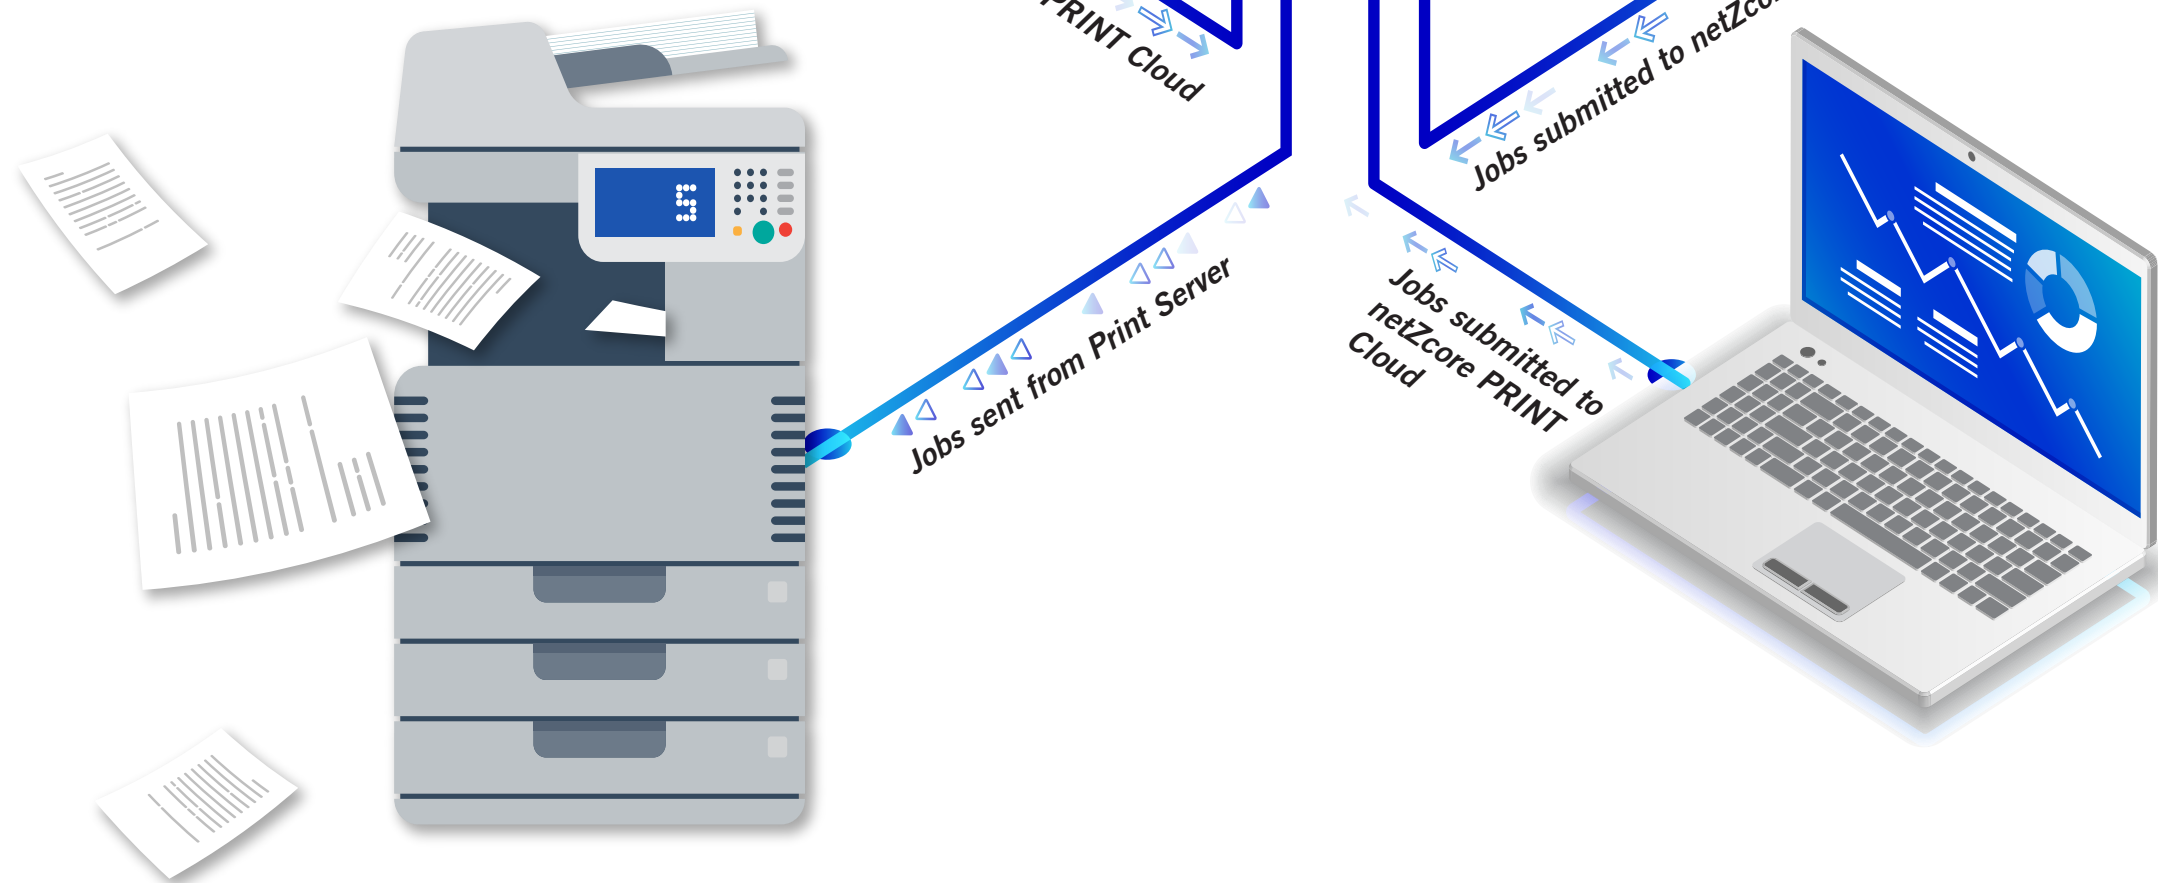

name/email and gains access to their job for printing. Log on from your device, view any of your files, select the ones you'd like to print, and send them off to the cloud, it's that easy. Additional document access and upload points also include direct email, and URL printing options.

**“Discover printers online  
and get your prints without  
the need to set up a print  
driver.”**

## Cloud Printing Made Easy

- Utilizes responsive website design technology so works on any device.
- User selects from the list of print locations.
- User can enter their known username and password or can “Enter as a Guest”.
- The user will be presented with the option to upload a new document, grab it from an URL or email it.

## Drag & Drop Files

- User can select a file from their local computer or drag and drop a file into the form window.
- Mobile devices leverage the option to select from images and documents.
- User can then upload a document to print or replace their selected document. (Single Document Upload Supported).

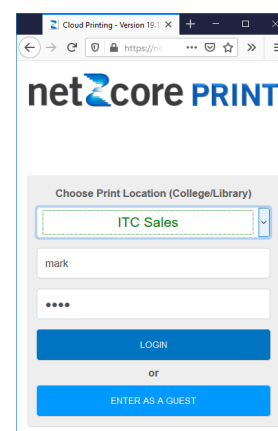

## Processing Jobs

- Job will then be processed.
- User will then be notified if successful with reference number.
- User will then be presented with their upload history with the option to upload additional documents.

## OEM Secure Print through the Cloud

MFP manufacturers have their version of Secure Print and netZcore PRINT can identify and handle the secure print for most of the OEMs. Drop your print job off in the Cloud, then go to the MFP and enter your username/password to print off the job.

Great for self serve, pay for use printing, copying and other services available at the MFP, payment made easy with our line of PayStations. There is a requirement for the Delivery Agent (DA) to be located on a device at the customers' site.

## Supported Formats

- MS Office - Word, Excel, PowerPoint
- Adobe PDF
- Image Files - TIFF, JPG, PNG, GIF
- .TXT

## Cloud Printing through On-Premise Print Management

netZcore PRINT (NTX) on premise will go get the job from the Cloud and deliver it to the Release station for printing. The on-premise will be central and manage all printing on that site whether from workstations, computer labs, library PCs, etc on the institution's print server. One solution for all your printing needs, from the cloud to your print server on down to the MFP or Printer.

# net2core PRINT Cloud

Secure Print Release- Print anything from anywhere
